## 2450-EF

CAST IRON INDIRECT WASTE DRAIN WITH P-TRAP AND FUNNEL.

### INSTALLATION INSTRUCTIONS

The Wade 2450-EF Indirect waste drain is used in hospitals, motels, laboratories or other areas where indirect waste lines above the floor require receptors to receive drip, condensate or waste water. The p-trap prevents sewer gas from entering the building. It is common for a 2450-EF to be mounted behind refrigerators or ice machines to capture condensate. The condensate piping is terminated above the top of the funnel - the funnel sump captures the drip and contains splashing. The drain piping is first run to an elevation above the expected finish floor level. The p-trap body is secured to the pipe with with a No-Hub coupling. No-Hub connections should be installed with Tyler or Anaco/Husky couplings and secured with a torque wrench to the manufacturers recommendations.
